SENIOR FULL STACK .NET DEVELOPER <https://www.linkedin.com/in/manuelalmazoraflores/>

<https://github.com/shintav12>

Lima, Peru

PROFILE

Senior Full Stack .NET Developer with +10 years of experience building scalable enterprise applications and microservices architectures with C# / .NET Core and React. Proficient in the full development lifecycle, from SQL Server schema design and EF Core data access through RESTful API development with OpenAPI/Swagger to cloud deployment on Azure and AWS. Experienced with event-driven architectures and messaging systems, secure interfaces using OAuth 2.0 and OIDC, and enterprise integrations with external APIs. Skilled in CI/CD pipelines, containerization, and Infrastructure as Code. Experienced with SOLID principles, Clean Architecture, DDD, CQRS, and TDD, working in Agile/SAFe environments with code reviews and mentoring development teams.

EXPERIENCE

Freelance (Self-employed)

03/2025-PRESENT

Independent Software Consultant

- Deliver full-stack solutions for clients across the .NET and PHP ecosystems, owning requirements, architecture, and deployment end to end.
- Build RESTful APIs and backend services with C# / .NET and PHP / Laravel over SQL Server and MySQL.
- Develop modern frontends in Angular, Vue, and React.
- Design relational database schemas and optimize queries for data-heavy applications.
- Apply AI-assisted development workflows (Claude Code, GitHub Copilot) to accelerate delivery while maintaining quality.

TECH STACK

C# .NET PHP Laravel Angular Vue.js React SQL Server MySQL AWS Azure Docker

Curotec

03/2023-02/2025

Software Developer

- Maintained, enhanced, and built new features for enterprise applications serving US-based clients, working across .NET, Angular, Vue.js, and PHP / Laravel.
- Developed RESTful APIs, business logic, and SQL stored procedures over MS SQL Server and MySQL for data-heavy workloads.
- Designed and implemented multitenant architectures tailored to specific business requirements.
- Built component-based frontends and integrated them with backend APIs.
- Performed in-depth code reviews, refactored legacy code, and upheld high code-quality standards.
- Researched and integrated Azure services to improve scalability, performance, and security.

TECH STACK

.NET Angular Vue.js PHP Laravel MS SQL MySQL Azure Git

Taller Technologies

04/2022-02/2023

Senior Software Engineer

- Designed, developed, and optimized business and client-facing applications with .NET, Angular, and React.
- Built robust REST APIs, business logic, and SQL stored procedures over MS SQL Server for large data sets.
- Implemented automated testing with XUnit to ensure reliability and maintainability.
- Collaborated with business partners and architects to identify complex technical needs and prioritize solutions.
- Provided technical guidance to team members and performed code reviews across distributed teams.

TECH STACK

.NET Angular React MS SQL Server XUnit ADO Git

Azumo

03/2021-03/2022

Tech Lead / Senior Software Engineer

- Led a team of 4-5 developers, providing technical guidance, mentorship, and career support.
- Drove technical decision-making for new requirements — architectural design, approach selection, and trade-off analysis.
- Designed, developed, and tested server features and robust REST APIs.
- Conducted onboarding interviews and technical assessments; hired and trained technical personnel.
- Ran code reviews and conducted security audits to identify improvements.

TECH STACK

.NET Core ASP.NET React.js Node.js SQL Server MongoDB Azure

Interfondos SAF

08/2019-02/2021

Fullstack Software Engineer

- Developed and maintained financial applications for a mutual funds / asset management platform handling large, sensitive data sets.
- Built REST APIs, business logic, and SQL stored procedures over MS SQL Server, with a focus on data accuracy and performance.
- Developed frontend interfaces in Angular integrated with backend services.
- Implemented automated testing with XUnit to ensure the reliability of critical financial workflows.
- Designed logical database models and relational data structures across the platform.
